1. Make and examine the report for the Scarlet Letter. Without knowing anything about the actual story in the novel, what could you say about the story based on the progression of sentiment? A few sentences are fine.

**The progression of sentiment in my code shows that this is a relatively happy story with relatively less unfortune in the middle part of the story, I will say this story might abrupt turning point near the end, and a smooth end. so the overall sentiment in my code is near 1.03.**

2. Compare the Scarlet Letter to A Tale Of Two Cities. What do the numbers tell you about this novel?

**The overall sentiment of Scarlet letter is near 1.03, the other one is near 0.14, I will say a tale of two cities' content is more sad than scarlet letter, and smoother.**

3. Finally, looking at the Trump speech, the sentiment numbers are both higher and lower than for the novels. What is it about a speech versus a novel that might account for this?

**More emotional up and down, which means trump is at a more important scenario that he needs to make his emotion up and down to express his meaning, or his personality is more insolent. The most positive point is around 7 and the most negative point is around -15, around 22 in the difference, he might be mad during the start and end of the speech.**
